Prompt Paraphrasing Guide

At the start of the task, you will be provided with a seeded prompt. You can paraphrase this seeded prompt by changing the semantics. <mark>The goal is to make it more human and natural.</mark> Keep the pragmatic meaning intact. For more information, see this website: [Pragmatics vs. Semantics](#)

Raphrasing should only take one or two minutes, as you don't have to change the meaning of the prompt but rather change how it's phrased. The main goal is to humanize it and make it sound less artificial without changing the actual requests/what's asked.

Example

Prompt State	Content
Seeded Prompt	Create a React/TypeScript based interactive art gallery application that dynamically showcases artwork in both desktop and mobile views. Users can browse through collections and view full-size images. The interface should include an art piece of the day feature that fetches the most popular artwork based on user votes. Implement a search function for specific artists or styles and provide a filter option for periods or techniques. Add an option for users to save their favorite pieces to a wish list for future reference.
Paraphrased Prompt	Hey! I want a cool digital art gallery. It will dynamically showcase artwork and look good in both desktop and mobile views. Visitors can explore different collections and view images full-size. Include a feature called "art piece of the day". This feature fetches the most popular artwork based on user votes. It should also have a good search function for specific artists or styles and my visitors should be able to filter for different periods and techniques. Lastly, add an option for users to save their favorite pieces to a wish-list.

Rules

#	Description
1	Don't add or remove any constraints.
2	Don't add extra examples or remove extra examples

3	Make sure that it sounds natural, as if written by a human.
4	Make sure the actual ask/request doesn't change (especially the single-contained ask)
